

1st Re-organization for the Step-by-step Daily Recovery (11.1~)

Follow-up Response (11.29~)

- The 2nd re-organization is postponed in consideration of the pandemic trend, such as the rapid increase in the number of confirmed cases.
 - Promote a follow-up response plan for medical and quarantine while maintaining the current level for 4 weeks before the effect of booster vaccination.

□ Home-based treatment Transformation

- A system in which patients are admitted to a medical institution only in exceptional case where home-treatment is not possible.

< Standard >

○ **(Subject)** Asymptomatic under the age of 70 without reason for hospitalization, confirmed with mild-case and agreed to home-based treatment.

○ **(Reason for Exclusion)** In case of a residential environment that are vulnerable to infection, in case of underlying disease, in case of non-vaccinated person with age of 60 years old and up, in case of co-habitation with the factors for hospitalization.

< Reform >

○ **(Subject)** To all Covid 19 Confirmed Patient

– However, Hospitalization if there is a factor for hospitalization, in the case of a residential environment that are vulnerable to infection, or in need of care without guardian (children, disabled, vaccinated person 70 years of age and up, etc.),

- 24 hours consultation in case of emergency, establish a hotline for treatment, advance designation of a transfer medical institution

□ **Encouraging non-vaccinated people and promptly implementing booster shots.**

○ **Encouraging non-vaccinated people**

- Resumption of advance reservations for children and adolescents(12~17 years of age) (~'22.01.22.), and vaccination through School-Vaccination Institution linkage depending on local conditions (organized by the Office of Education).
- Cooperating with the medical community and encouraging active vaccination of the elderly who often visit medical institutions for other treatment

○ **Implementation of Rapid Booster Vaccination**

- In December is the operation for intensive vaccination period for Seniors (60 years old and up), similar to influenza vaccination, same-day vaccination is administered without prior reservation.
- For all those who have completed basic vaccination over the age of 18, booster vaccination is administered 5 months (150 days) after the basic vaccination
- Set the validity period (6 months) for the quarantine pass(vaccination certificate), and additional vaccination are required within 6 months to use facilities that require a quarantine pass.
- Individual condition (disease treatment, overseas departure, etc), group vaccinations (facilities that are vulnerable to infection, medical institutions, etc) and those wishing to receive residual vaccines can receive early vaccinations within 1 month compared to the standard*standby for additional vaccinations by target group.

- * (4 months after the completion of basic vaccination) 60 years old and up, those with underlying disease, medical institutions, facilities vulnerable to infection
- (5 months after the completion of basic vaccination) 18–49 years old, age of 50's
- (2 months after the completion of basic vaccination) for those who are vaccinated with Janssen vaccine, for those who are of with weak immune system.

□ Strengthen Quarantine

- Reinforcement of PCR testing* for facilities that are vulnerable to infection, such as Nursing Hospitals and facilities, and it is focused to those who have completed the additional vaccine (booster shot).
- * (Standard) 1 PCR test (when hospitalized) + 1 day waiting in isolation room
→ (Changes) **2 PCR tests** (①when hospitalized, in isolation room for 3rd day) + **4 days waiting in isolation room**
- Winter Kimchi events are prohibited at leisure welfare facilities for Elderly(Senior Center, Senior Welfare Center, etc.)
